

APPS PDF

IFS Touch Apps are Smartphone business applications developed for the mobile workforce. The first two IFS Touch Apps are IFS Trip Tracker for travel expense reporting and IFS Notify Me for approvals of purchases, time, expenses, etc. With the apps, IFS can offer business people to work whenever and wherever they wish.

IFS Touch Apps have been developed to empower the mobile workforce by delivering core functionality from IFS Applications in the form of user-friendly apps. The new IFS Cloud will be the foundation for IFS Touch Apps, enabling users to connect to the cloud using various Internet-connected devices and work against their IFS Applications installation—anywhere in the world. IFS Touch Apps will give the user the option to work offline and send the information at a later time, a valuable feature for long-haul flights or trips to areas with poor connectivity. When working offline, tasks will be stored for easy follow-up via IFS Enterprise Explorer.

THE FIRST TWO IFS TOUCH APPS DELIVERED ON THE IFS CLOUD PLATFORM ARE:

- ✓ **IFS Trip Tracker:** This app lets users log travel expenses as they are happening, without having to wait until Monday morning when they have returned to the office.
- ✓ **IFS Notify Me:** With this app, users can approve purchases, time sheets and expenses at any time, from anywhere, directly from his or her smartphone.

The underlying ambition behind IFS Touch Apps is to deliver a genuine 'app experience' and not a thin veneer wrapped around a website. Not only is the app software in itself functionally rich, the apps are built to utilize the features already present in the Smartphone. IFS Touch Apps can thereby call upon hardware features such as camera, GPS and sound recorder in order to help the user make the most of his/her mobility. Building real apps also allows them to be used in situations where network connectivity is unavailable or unreliable, for example during flights or when sitting in a taxi.

THE IFS TOUCH APPS OFFER A NUMBER OF BENEFITS:

- ✓ Improved efficiency in performing administrative tasks such as travel expenses and approvals.
- ✓ Business value is guaranteed since IFS Touch Apps are built to deliver functionality from the IFS Applications suite's core processes.
- ✓ IFS's unique app architecture means it is easy for users to try, adopt and update the apps.

IFS Touch Apps are developed for the Android and iPhone platforms, giving users a wide range of compatible devices.

For more information on IFS Labs please visit the product section on www.IFSWORLD.com

IFS Labs is a functional unit within IFS Research & Development that explores new areas of business application functionality, and serves as a testing ground for new development initiatives and 'proof of concept' projects not yet ready for large scale deployment. Please note that the products/functions presented on the IFS Labs section are part of on-going development projects and currently not offered to IFS customers.
