Enhanced Software Platform for the Supply Chain

Radley Corporation announces technology platform now to include RFID Solutions, Container Tracking and support for iOS & Android devices.

Radley Corporation, a global supply chain solutions provider and long-time IFS Partner, has announced additions to its EDI, MES & WMS technology platform. The enhanced software offerings were developed in response to customer driven requirements for end-to-end [RFID](#) systems, a more sophisticated way to track and analyze returnable [Containers](#) along with the ability to utilize iOS and Android devices.

Hundreds of millions of dollars are spent on returnable containers, racks and packaging throughout the industry. However, there is often very little thought as to how they will be managed and maintained. Manual processes that take place to inventory, reroute and replace containers are a significant unplanned cost, can be a drain on resources and ultimately affect a company's overall ROI. "Once again our customers have inspired us to tackle a challenge they're up against," said Radley's Sr. Vice President, David Barks.

Popular concepts like the "Internet of Things" and having a "Connected Supply Chain" led Radley to think outside the box and, expanding on its already robust Asset Tracking software, recognize an opportunity to incorporate RFID technology to greatly improve the visibility and control of reusable containers. Unlike other RFID vendors who simply supply tags and readers, Radley partners with an industry leader to provide the best in consulting, engineering, middleware, tags and interrogators. Just like the other solutions on Radley's robust [platform](#), RFID and Container Tracking are highly configurable, easy to use and can be [integrated](#) to complement existing enterprise systems such as IFS Applications™ or be implemented as a stand-alone solution.

Utilizing RFID, data is collected as containers move throughout the manufacturing, warehouse and distribution processes. Radley filters, aggregates and validates the data to provide real-time reports, dashboards, alerts and notifications based on a company's specific business rules and requirements that can be viewed from a PC, device or tablet. With reliable data, better business decisions can be made; shrinkage levels drop, error and risk is minimized, labor is reallocated and product movement workflows are improved.

About Radley Corporation

Through a combination of consulting, software & hardware configuration, training and support; Radley provides solutions to organizations around the world looking to improve the efficiency and productivity of their business logistics processes.
