

Maintenance planning and scheduling in **asset-intensive industries**

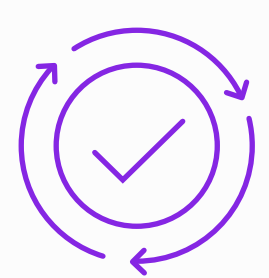

Maximize your assets' yield and life by minimizing downtime and maximizing utilization.

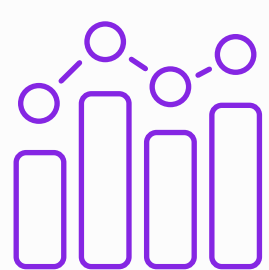

Challenges with **Planning & scheduling**

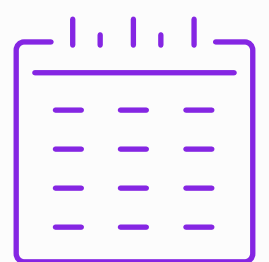

The growing number and **complexity of assets**.

The need to **balance uptime and maintenance**.

The **huge impact** of downtime, in terms of operational continuity, cost & customer experience.

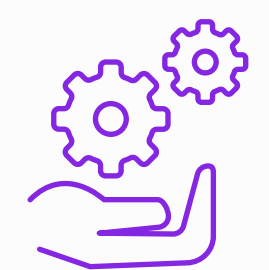

Complexities for companies to move away **from scheduled maintenance to conditioned maintenance**.

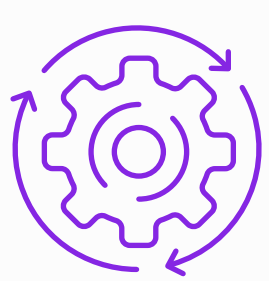

Complexities around business criticality of the asset and implications of its failures.

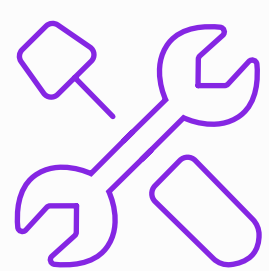

Benefits with **Planning & scheduling optimization**

Maximum **asset utilization and availability**.

Improved asset lifetime value.

Reduced unplanned downtime and operational disruption.

High first-time fix rates & **technician productivity**.

Reduced travel time, fuel costs, and CO² emissions.

Optimize your Maintenance planning and scheduling. Allow your planning and asset maintenance staff to balance asset uptime and maintenance needs and make sure the most important activities are prioritized in the plan.
